

IP Intelligence Report

MONITOR-THREAT Cyber Threat Intelligence Platform · v2.0

Report generated: 9/24/2026, 2:52:57 AM
Target IP: 8.8.8.8

1. Executive Summary

COMPOSITE SCORE

01.00

CLASSIFICATION

BENIGN

VIRUSTOTAL ENGINES

0/89

No source flagged this IP as malicious. Treat as benign unless new intelligence emerges.

2. Geolocation & ASN

Field	Value
IP	8.8.8.8
Country	United States (US)
Region	California
City	San Jose
Coordinates	37.3393939, -121.8949553
ASN	AS15169
Organization	Google LLC
ISP	Google LLC
Domain	google.com
Timezone	America/Los_Angeles
rDNS	-

Source: ipwho.is

3. Open Ports & Services

Field	Value
Open ports	2 — :53 (DNS) :443 (HTTPS)
Hostnames	dns.google, nationalgeographic.ee
Known CVEs	none
CPEs	-

Source: Shodan InternetDB · 2 ports · 2 hostnames · 0 CVEs

4. Reputation — VirusTotal

Field	Value
VT Score (composite)	0/100 — BENIGN
Flagging engines	0 / 89
Engine breakdown	Malicious: 0 · Suspicious: 0 · Undetected: 36 · Harmless: 53 · Timeout: 0
Community reputation	+561
Community votes	294 harmless · 59 malicious
Last analysis	9/24/2026, 1:11:35 AM

5. DNSBL / Blacklist Summary

Field	Value
Total zones checked	15
Blacklisted	0
Brownlisted	0
Yellowlisted	0
Whitelisted	0
Not listed	15
Failed queries	0

No DNSBL zone flagged this IP.

6. Threat Intel Sources

Source	Verdict	Details
VirusTotal	benign	0/89 engines · 294/59 community votes · reputation 561
multirbl.valli.org	clean	15 DNSBL zones checked
Shodan InternetDB	benign	0 tags, 2 open ports
AbuseIPDB	not_configured	Set ABUSEIPDB_API_KEY env var to enable

7. Additional Signals

No additional signals.

8. Methodology & Sources

This report was generated by aggregating live data from the following open and free-tier intelligence services:

Source	Use
ipwho.is / ip-api.com	IP geolocation and ASN (free, no API key)
multirbl.valli.org	DNSBL lookup across 200+ blacklist zones, plus direct DNSBL DNS checks against 15 well-known zones (Spamhaus, SpamCop, SORBS, Barracuda, UCEProtect, CBL, Mailspike, SpamRats, ...)
Shodan InternetDB	Open ports, hostnames, tags and known CVEs (free, no API key)
VirusTotal v3	Last analysis stats, per-engine verdicts, community votes and reputation score
AbuseIPDB	Abuse reports in the last 90 days (optional, when ABUSEIPDB_API_KEY is configured)

Composite score = VirusTotal score (primary) + weighted signals from DNSBL, Shodan and AbuseIPDB (capped at 100).
Classification thresholds: BENIGN < 5, SUSPICIOUS 5-19, MALICIOUS >= 20.
