

# IP Intelligence Report

MONITOR-THREAT Cyber Threat Intelligence Platform · v2.0

Report generated: 9/24/2026, 3:03:21 AM  
Target IP: 185.220.101.34

# 1. Executive Summary

---

COMPOSITE SCORE

100

CLASSIFICATION

MALICIOUS

VIRUSTOTAL ENGINES

19/89

Multiple sources agree this IP is associated with malicious activity. Immediate containment and investigation are recommended.

## 2. Geolocation & ASN

---

| Field        | Value                         |
|--------------|-------------------------------|
| IP           | 185.220.101.34                |
| Country      | Germany (DE)                  |
| Region       | Land Berlin                   |
| City         | Berlin                        |
| Coordinates  | 52.5243699, 13.4105327        |
| ASN          | AS60729                       |
| Organization | CIA TRIAD SECURITY LLC        |
| ISP          | Stiftung Erneuerbare Freiheit |
| Domain       | relayon.org                   |
| Timezone     | Europe/Berlin                 |
| rDNS         | -                             |

## 8. Methodology & Sources

This report was generated by aggregating live data from the following open and free-tier intelligence services:

| Source                | Use                                                                                                                                                                                 |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ipwho.is / ip-api.com | IP geolocation and ASN (free, no API key)                                                                                                                                           |
| multirbl.valli.org    | DNSBL lookup across 200+ blacklist zones, plus direct DNSBL DNS checks against 15 well-known zones (Spamhaus, SpamCop, SORBS, Barracuda, UCEProtect, CBL, Mailspike, SpamRats, ...) |
| Shodan InternetDB     | Open ports, hostnames, tags and known CVEs (free, no API key)                                                                                                                       |
| VirusTotal v3         | Last analysis stats, per-engine verdicts, community votes and reputation score                                                                                                      |
| AbuseIPDB             | Abuse reports in the last 90 days (optional, when ABUSEIPDB_API_KEY is configured)                                                                                                  |

Composite score = VirusTotal score (primary) + weighted signals from DNSBL, Shodan and AbuseIPDB (capped at 100).  
Classification thresholds: BENIGN < 5, SUSPICIOUS 5-19, MALICIOUS >= 20.
